RE: Mifflin County Jr. High School

Mifflin County School District
Mr. Dallas Stahlman
201 Eighth St
Lewistown, PA 17044

Mr. Stahlman:

I have been made aware that there are on-going concerns regarding indoor air quality at the Jr. High School building relative to asbestos abatement activities.

From July 8, 2013 through August 15, 2013 First Capital Insulation was completing asbestos abatement within the crawl spaces located beneath the building as well as in the Auditorium. There were no asbestos abatement activities conducted in occupied areas of the building. The Auditorium is now considered a construction area and will not be accessible to students or staff.

During the abatement activities JMSI was on-site full time in order to manage the project and collect daily continuous air quality samples from numerous areas throughout the building. The purpose of these environmental samples was to ensure that there was no contamination infiltrating the building from active work areas. JMSI has daily documentation of indoor air quality which will be inserted into a report and forwarded to you shortly. The daily air samples show that there was not at any time a hazardous condition in existence relative to the asbestos abatement activities.

Please review this information and feel free to contact me with any questions or concerns.

Sincerely:

Jeff J. Miller
